## SUMMARY

As an experienced frontend developer with over six years of expertise working in both start-up and corporate environments, I have been actively involved in enhancing existing as well as developing new functionalities for a variety of web applications. Throughout my career I have successfully participated in the creation and delivery of exceptional websites and web applications from the ground up.

After graduating from university I had a two year break from professional growth and served in the army. Following that I decided to gain some knowledge in the rapidly-growing IT field and took a course in web development. I grew increasingly passionate and decided to pursue a career as a web developer and have been working as such since 2017.

I'm passionate about travelling, new experiences and football. I also enjoy spending time with my friends and family and working towards our goals with my wife.

## WORK EXPERIENCE

### EPAM ANYWHERE

Software Engineer

2021 Dec - Present

EPAM is a multinational company with expertise in using digital technology to transform businesses. EPAM offers a combination of software engineering, strategic consulting, design thinking, and physical-digital capabilities to provide innovative solutions that prioritize the needs of humans and deliver real value to customers.

- Got enrolled in a project for one of the top EPAM accounts in a month
- Have been working on the development of a plugin-style application written in Angular framework which is a part of a larger application.
- Integrated APIs, added new features, fixed existing functionalities and improved the application's overall performance.

### PRAGMATIX AGENCY

Front-end web developer

2017 Jun - 2021 Dec

Pragmatix is a small start-up style company that turns clients ideas into digital experiences.

1. Contributed to the development of a fundraising application for Leukaemia treatment, utilizing Angular 2+ to build the application from the ground up.
  - Collaborated on a team to create a new application to replace a legacy system.
  - Focused primarily on front-end integration with existing APIs, implementing a variety of user forms, optimizing pages for mobile devices and ensuring they were responsive, and adhering to UI and UX specifications.
  - Additionally, contributed to the development of new features and enhancements to improve upon the legacy application.
2. Contributed to the development of a hiring platform, providing a means for companies and individuals to connect with one another.
  - Utilized Angular for front-end development and Laravel for back-end development.
  - Gained extensive knowledge in back-end development through managing data from multiple tables, performing calculations, and utilizing migrations to modify the database schema.
  - Also responsible for developing profile pages and implementing job search and application processes for users with varying levels of permissions.
3. Various other smaller projects.
